

Have you heard about Girls Go CyberStart, the program that helps girls discover their talent for cybersecurity?

Over 10,000 high school girls took part last year in the Girls Go CyberStart program and loved it! It's free and our goal is to give every student across the country the chance to play. The fun suite of challenges, tools and games gives students the chance to explore cybersecurity and computer science. It's discovery-based learning so student and teachers don't need to be cyber savvy before they start!

"In my high school, there rarely any opportunities like this where someone like me who knows nothing about cybersecurity can one, learn about it, and two, love everything about it from the difficult puzzles to the unique challenges. I hope that something like this will be offered again - not only to me but to all those girls." High school girl GGCS winner

"Students had an opportunity to try something completely new and discover that they are smarter than they think. My students were completely engaged and requested that we work on Saturday because they were enjoying it so much. They would dig for hours and were thrilled when they solved a difficult problem." Girls Go CyberStart Teacher.

Is the next cybersecurity leader sitting in your classroom? Get students playing to find out! Learn more and register at girlsgocyberstart.org

A girl can play on her own or as part of a club so she can discover if she has an interest and talent in cybersecurity. And, to make sure technology isn't a hurdle, we created a free cloud-based PC so that every girl has what she needs to participate! ndg.tech/ggcs

Boys can also discover their interest and learn with CyberStart Game. Clubs that have 5 girls who qualify for in Stage 1 Assess will earn additional non-competition licenses for boys or other girls in their school.

To make it even more exciting, Girls Go CyberStart has great recognition and cash prizes for individuals and schools to win! Details included in this [2-page flyer](#).

Registration is open now until February 14th at girlsgocyberstart.org
